

1 HTML

HTML stands for HYPERTEXT MARKUP LANGUAGE. It is a computer language that is used to build and structure websites and web pages and also fill it with information.

2 HISTORY

HTML was created by Tim Berners-Lee, a physicist contractor at CERN. He created HTML in the year 1991; it was the first publicly available description of HTML and it was a document called 'HTML TAGS'.

Later on, on November 24th, 1995, a version of HTML called HTML 2.0 was officially released as the first HTML to be used as a standard. BUT that's not all, as the years progressed, later versions of the programming language began to be developed and released.

3 HTML VERSIONS

- HTML 1.0 released in the year 1993.
- HTML 2.0 released on 24th November, 1995.

Figure 1: Tim Berners-Lee

- HTML 3.0 released on 14th January ,1997.
- HTML 4.0 released on 18th December, 1997.
- HTML 4.01 released on 24th December 1999.
- XHTML released on May ,2000.
- HTML 5.0 released on 28th October, 2014.
- HTML 5.1 released on 1st November, 2016.
- HTML 5.2 released on 14th December, 2017.
